

SLA Framework

SLA Framework — Measurement Methodology

Each KPI has a defined measurement window, data source, and breach threshold. Breaches are recorded monthly; repeated breaches trigger escalation per Governance schedule.

Illustrative KPI families (not exhaustive): availability, incident resolution, data freshness, security incident response, milestone delivery, and customer-impact events.

Targets are expressed as minimum thresholds or maximum allowable downtime depending on KPI type. Overall SLA compliance rolls up from monthly KPI results across all in-scope services.
